

## Account Links Manager for Magento®2

Thank you for purchasing our extension! If you have any questions - feel free to email us [magery.themes@gmail.com](mailto:magery.themes@gmail.com)

# Overview

This extension allows to manage customer account navigation links. Supports both Magento Community and Enterprise Edition versions.

## Installation

Unpack the archive. You will be able to find **src** directory in the root folder. Copy contents of the src directory to the root directory of your Magento installation.

Connect via SSH and run the following commands in the root folder:

1. `php bin/magento module:enable Magery_AccountLinksManager`
2. `php bin/magento setup:upgrade`

Then **clear the cache**.

Go to admin page under *System* → *Cache Management* and press **Flush Magento Cache** button. Now the module is enabled in the system and it is ready to be configured and used.

## Configuration

In Magento admin navigate to *Stores* → *Configuration* → *Customers* → *Customer Configuration*.

There you will see a new configuration section **Account Links**.

This area contains list of all default account links (see the screenshot below containing the full list of links).

Each link has 3 fields:

<b>Status</b>	Link status (Enabled/Disabled). Default value: Enabled (link is visible)
---------------	--

<b>Link Text</b>	Allows to change link label. If you leave this field empty, then default label will be used. Note: this setting affects only link label in the navigation block, it doesn't affect page title of the section/page when user navigates to it.
<b>Position</b>	Allows to change link order. Here you can enter numeric value (can be negative as well). Empty value corresponds to zero position.

Configuration fields in admin area are sorted by position as well, as on the frontend. It is possible to change settings on different levels (default/website/store).
