

Disable Email Notifications for Magento®1

Thank you for purchasing our extension! If you have any questions - feel free to email us magery.themes@gmail.com

Overview

This extension allows to disable specific email notifications in Magento 1 store. It supports both Magento Community and Enterprise Edition versions.

Installation

Unpack the archive. Copy contents of the archive to the root directory of your Magento installation.

Flush Magento cache in *System* → *Cache management*

Now the module is enabled in the system and it is ready to be configured and used.

Configuration

In Magento admin navigate to *System* → *Configuration* → *Advanced* → *System*.

There you will see a new configuration section **Disable Email Notifications**.

This area contains list of all default email notifications in your Magento installation.

Here you can change notification setting to *Off* in order to disable needed email notification type (by default, all notifications are enabled = On).

It is possible to change settings on different levels (*default/website/store*).
