

## International Telephone Input for Magento®2

Thank you for purchasing our extension! If you have any questions - feel free to email us [magery.themes@gmail.com](mailto:magery.themes@gmail.com)

# Overview

This module integrates [International Telephone Input](#) JavaScript plugin with Magento 2. It shows country flags for telephone inputs and provides other useful features such as validation, country detection, etc.

## Applicable areas

This extension covers all standard Magento areas containing telephone inputs.

### Community Edition:

- Customer Account: Address Book
- Contact form
- Checkout: billing and shipping address forms
- Shipping to Multiple Addresses

### Enterprise Edition:

- Gift Registry form
- B2B (Enterprise Edition version):
  - Company Registration form
  - Company Profile
  - Company Structure
  - Company Users
  - Negotiable quote - add new address form (My Quotes section)
- Customer and Customer Address attributes
  - Customer Registration form
  - Customer Account Edit form
  - Customer Address Registration
  - Customer Account Address

## Installation

1. Copy contents of the src directory to the root directory of your Magento installation.
2. Run these commands to enable the module:

```
php bin/magento module:enable Magery_IntlTellInput
php bin/magento setup:upgrade
```

## Enterprise Edition module installation

There is an additional module available for Enterprise/Cloud editions:

### **Magery\_IntlTellInputEe**

It can be installed using this commands:

```
php bin/magento module:enable Magery_IntlTellInputEe
php bin/magento setup:upgrade
```

## Configuration

Module configuration can be found in admin:

*Stores* → *Configuration* → *Customers* → *International Telephone Input*

## Configuration options:

### **General**

Enabled	Enables module
Allow Dropdown	Display the country dial code next to the selected flag so it's not part of the typed number.
Custom CSS Container	Additional classes to add to the parent div.
Separate Dial Code	Display the country dial code next to the selected flag so it's not part of the typed number.
Use Utils Script	Enables formatting and shows telephone number placeholder (example format for the selected country).

Enable Validation	Enables validation provided by Google's libphonenumber library.
-------------------	---

## Country Settings

Allowed Countries	List of the countries included in the dropdown.
Initial Country Mode	<p>Allows selecting the initial country.</p> <p>Available options:</p> <ul style="list-style-type: none"> <li>• None - the first available country will be selected</li> <li>• Auto - detects the customer's country using IP geolocation lookup</li> <li>• Configured - allows specifying one country that will be selected by default</li> <li>• Initial Country Configured    Default selected country (if "Initial Country Mode" option is set to "Configured")</li> </ul>
Preferred Countries	Specify the countries to appear at the top of the list.

## Advanced
